# PSRC softstarters

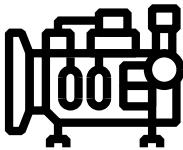

## For scroll compressors

- PSRC is optimized for scroll compressors  
less stress and reducing maintenance cost

# PSRC is optimized for scroll compressors

## Less stress and reducing maintenance cost

### General information for compressors

There are different types of compressors like piston compressor, scroll compressor, screw compressor etc. Smaller compressors are often of the piston type and the load torque increases linearly with the speed. Screw compressors are often used when there is a bigger need for air flow and this type has a load torque increasing with the square of the speed. Most compressors are started unloaded and are considered to be light starts.

By using an ABB's softstarter it is possible to limit the starting torque to a level suitable for all different applications. The result is less stress on the compressor reducing the maintenance cost to a minimum. For scroll compressors, ABB has the special version PSRC that is optimized for that application.

### Selection of a suitable softstarter

A compressor is usually a normal start and then the softstarter can be selected according to the motor kW size. If the compressor is a heavy duty start, the softstarter should be upsized one size. The same applies if more than 10 starts per hour are performed, upsize one size.

### Features for scroll compressors

- Reduced starting current
- Short starting time (<1s) to guarantee lubrication of the compressor
- Recommended minimum starting voltage to secure a start in 400 V network
  - 200V for smaller compressors
  - 220V for bigger compressors

### Features for the OEMs

- Easy and reliable
- 60 degree ambient temperature
- "Temper proof" No risk of parameters getting changed after installation

### Recommended basic settings for scroll compressors:

Start ramp: < 1 sec.  
Start mode: Voltage ramp  
Stop ramp: 0 sec  
Stop mode: No ramp  
Start ramp initial level: 50%

## Rhoss - Italy

### Keeps air flowing

#### The client

Rhoss is an Italian specialist in air conditioning and air handling products and systems. For over 40 years, it has been synonymous with quality, innovation and top level service. In a recent project, where high inrush currents caused problems to the scroll compressors used to compress air, Rhoss contacted ABB for a more sustainable motor starting solution.

#### The challenge

Many HVAC (Heating Ventilation and Air-Conditioning) projects use scroll compressors which require short starting times. In combination with customers requiring low starting currents, this proved a challenge for Rhoss. Other challenges are high temperatures and small spaces. Italian Rhoss had experienced all of the above in previous projects and sought a solution. They needed just one single product that could handle all these challenges. ABB had an answer.

#### The ABB solution

Rhoss implemented ABB's softstarters in its starting equipment and were soon aware of the concept's many benefits. An integrated bypass meant the starting solution took up less space which also meant Rhoss could spend more of the space on controlling the high temperatures. The biggest benefit of all though is that the softstarter reduced the inrush currents of the scroll compressors by 60 percent while still maintaining the short starting time that this sort of application needs. The lowered starting currents mean less stress is put both on motor and compressor, reducing the need of maintenance and repairs.

**Starting currents  
reduced by 60%**

# PSRC

## Introduction

### Feature list

- Rated operational current: 3...105 A
- Operational voltage: 208...600 V AC
- Wide rated control supply voltage: 100...240 V AC, 50/60 Hz
- Two-phase controlled
- Soft start with voltage ramp
- Built-in bypass for energy saving and easy installation
- Easy set-up
- Fieldbus communication with fieldbus plug adapter and the fieldbus plug
- Run and Stop of Ramp relays available for monitoring
- Connection kits available for connection to ABB's manual motor starters (MMS)
- Ambient temperature -25 to +60 degrees

### Reduce the electrical stresses and keep the motor protected with the MMS

The PSRC reduces the starting current for the motor. The possibility to connect it to the manual motor starter makes it possible to build a compact and complete starting solution with overload and short-circuit protection.

### Saving time and money with built-in bypass and easy set-up

On the PSRC, the bypass is built in and verified by ABB, saving you time during installation and space in your panel.

### Reduce the mechanical stresses on your motor

Soft start and stop with PSRC will reduce mechanical wear and tear on the application and increase the availability and uptime.

#### **Motor protection with manual motor starter**

Use the PSRC together with the MMS to get a complete motor starter with soft start and stop together with overload and short circuit protection.

#### **Connection kit (optional)**

The connection kits simplifies installation of the PSRC by making the connection to the MMS screwless.

#### **Screw or DIN-rail mounted**

PSRC is fast and easy to install by using screw mounting or DIN-rail mounting (PSRC3 ... PSRC45).

#### **Output signal relays**

PSRC has output relays for Run and Top of ramp (PSRC25 ... PSRC105).

#### **LED indicators**

PSRC has LED indicators for On/Ready and Run/Top of ramp.

#### **Fixed settings**

"Temper proof" No risk of parameters getting changed after installation.

# PSRC coordination Overview
